Harvard Business School

PROJECT NAME

Harvard Business School
Campus Mapping

SERVICES

- Topographic and Boundary Surveys
- Utility Infrastructure Mapping
- Utility Tunnel Mapping
- Construction Layout and Support Services

Harvard Business School: Campus Topographic, Utility, & Construction Survey Services

OVERVIEW

The Harvard Business School is in the process of renovating their Boston campus grounds with new landscaping and improvements to existing utility infrastructure. DGT has assisted the facility management group, project architects and civil engineers, and contractors with topographic and existing conditions surveys, and construction layout. We have also been providing data, CAD services and plan preparation for use in the design process.

DGT's role in this project continues the work of its Gunther Engineering Division and its predecessor firms William S. Crocker, and Aspinwall & Lincoln. Our surveys of the Harvard Business School campus date back to original development of the campus in the Allston section of Boston.

SOLUTION

The Harvard Business School is in the process of renovating their Boston campus grounds with new landscaping and improvements to existing utility infrastructure. DGT has assisted the facility

management group, project architects and civil engineers, and contractors with topographic and existing conditions surveys, and construction layout. We have also been providing data, CAD services and plan preparation for use in the design process.

DGT's role in this project continues the work of its Gunther Engineering Division and its predecessor firms William S. Crocker, and Aspinwall & Lincoln. Our surveys of the Harvard Business School campus date back to original development of the campus in the Allston section of Boston.

OUTCOME

The Harvard Business School is in the process of renovating their Boston campus grounds with new landscaping and improvements to existing utility infrastructure. DGT has assisted the facility management group, project architects and civil engineers, and contractors with topographic and existing conditions surveys, and construction layout. We have also been providing data, CAD services and plan preparation for use in the design process.

DGT's role in this project continues the work of its Gunther Engineering Division and its predecessor firms William S. Crocker, and Aspinwall & Lincoln. Our surveys of the Harvard Business School campus date back to original development of the campus in the Allston section of Boston.

ABOUT DGT

DGT Associates is New England's premier surveying and engineering firm. With clients spanning the cross section of community stakeholders from developers and construction managers to municipalities and homeowners, DGT provides unparalleled experience in the region. DGT is committed to thoughtful innovation in the surveying and engineering industries. We utilize cutting-edge technology, combined with decades of field-work experience, to deliver valued, meaningful results. Our professional crews are trained and perform to the highest standards of precision and safety. And our team is sized for the flexibility required to take on projects of varying scales, timeframes and complexity.
